- Portuguese (Native)
- English (Fluent)

CERTIFICATIONS

- [Scientific Computing with Python](#)
- [Data Visualization](#)
- [JavaScript Algorithms and Data Structures](#)

PROFILE

I've spent the last years turning designs into interactive, high-performing web experiences with React and TypeScript. Alongside front-end work, I have intermediate experience building back-end services in Python and Node.js, which lets me bridge the client and server making everything more fun. I also develop mobile applications with React Native, delivering consistent experiences across iOS and Android. The projects I worked on affected thousands of people, making their work easier and their life better. They include platforms for asset and portfolio management for companies on the real estate and stock market, as well as automation and work management for top-ranked advisory, assurance and tax firms. I am passionate about learning and experimenting new technologies, programming languages, and tools. Always trying to create something to enhance my skills and stay up-to-date with industry trends. I am dedicated to lifelong learning and always eager to explore opportunities for growth in my field.

WORK EXPERIENCE

Makai Labs

2024 - PRESENT

Frontend Engineer

- Implemented from the very beginning different modules for one of the biggest accounting and consulting firms on the US (Cherry Bekaert LLP).
- The challenges included implementing an engagement letter builder, with fully dynamic fields, components, and templates, in order to facilitate the workflow of the entire team of managers, partners and associates, and to establish reliable agreements between the company and their thousands of clients.
- Built an entire engagement management portal, with dynamic hierarchical project plans and binder files structure. As well as an entire task management to ease up the hundreds of steps the employees need to go through to deliver a full report to their clients.
- Implemented fully secure and customizable role permissions system to enable limited access to the platform depending on the multiple job functions existing inside the company ecosystem.
- Latest feature implemented was an entire customizable dashboard creator in order to easily visualize in details their reports for productivity, leverage, budget, and much more.

Artha

2023 - 2024 (10 months)

Frontend Engineer

- Helped to create a next level portfolio management platform that makes it easy for both advisors and individual investors to match their goals on the stock market.
- Implemented a whole system to effortlessly monitor, evaluate, and benchmark at three levels: household, client, and account.
- Built a model-based approach to help ensure that clients investments align with their objectives in order to make confident trading decisions in pursuit of financial success.
- Helped to create many more powerful features like customizable investment strategies, risk monitoring, tax-efficiency, and direct indexing opportunities.

Lobby CRE

2020 - 2023 (3 years 4 months)

Frontend Engineer

- Helped to create from scratch a platform for asset and portfolio management that helped multiples companies and investors in the real estate market.
- Implemented a tool for customizable reporting of assets for clients.
- Built a property management system with easy-to-see KPIs
